## DETAILED ACTION

### *Drawings*

1. The drawings are objected to because they fail to label the element boxes in figure 1. Without some indication as to the content of the boxes (or preferably symbols of the actual elements) it is not clear as to what the elements are and they are not explanatory to a reader as a quick method of determining the general background of the invention.

See MPEP 608.02 and 37 CFR 1.84 (o) -- **Legends**

Suitable descriptive legends may be used, or may be required by the Examiner, where necessary for understanding of the drawing, subject to approval by the Office. They should contain as few words as possible.

### *Claim Objections*

2. Claims 1 and 3 are objected to because of the following informalities:

The limitation "the electromagnetic waves of which are blocked" (claim 1, lines 8-9) is objected to as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention, since it is not clear what the applicant means by the limitation.

Claim 1, lines 19-23 should read as follows:

"converter (120) to detect a variation in current resulting from an approach of the battery pack (B) to a non-contact charging pad, and outputting a comparison current depending on the variation in current; [[a]] the central processing

unit (180) for detecting the approach of the battery pack (B) using the comparison current [[input]] output ".

The term "the non-contact charging pad" (claim 1, lines 29-30) lacks antecedent basis, but if added to the claim language as suggested by the examiner above, the problem will be overcome.

The term "a gate driver (160)" should read as --the gate driver (160)-- (claim 1, lines 30-31).

The word "input" should read as --inputted-- (claim 3, line 7).

The word --the-- should be added before the term "variation" (claim 3, line 10).

The term "a comparison" should read as --the comparison-- (claim 3, line 12).

Appropriate correction is required.

***Allowable Subject Matter***

3. Claims 1-11 would be allowed, if the objections stated above are obviated.
4. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).
5. The following is a statement of reasons for the indication of allowable subject matter:

As per claim 1 primarily, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

An electromagnetic wave filter connected to a power input terminal to block electromagnetic waves caused by Alternating Current (AC) power, an ion generation

unit, a current detection unit interposed between a flyback converter and a series resonance type converter to detect a variation in current resulting from an approach of a battery pack to a non-contact charging pad, and outputting a comparison current depending on variation in current; a central processing unit (180) for detecting the approach of the battery pack (B) using the comparison current input from the current detection unit (170), controlling the gate drive (160) according not only to whether the battery pack (B) approaches but also to the current of a temperature protection circuit unit (183) to stop the switching of the gate drive (160) when abnormal operation occurs or the temperature of a foreign object placed on the non-contact charging pad exceeds a predetermined temperature, a gate driver (160) for outputting gate signals under the control of the central processing unit (180).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
